**Ivan Bulloch : Juegos** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Juegos:

Kids learn basic math concepts as they make crafts, play games, and work puzzles. The crafts have clear instructions with detailed illustrations, and text boxes on each page explain which math skills are being learned. Hands-on activities use basic household items.

From Publishers Weekly Grade 2-4-Librarians seeking Spanish-language curriculum materials will welcome this series offering a variety of activities to reinforce basic mathematical concepts. The crafts are age appropriate but will require adult supervision and or assistance in most cases. One example is the paper-cutting activity that appears in Figuras (Figures). One page demonstrates a free-form figure cut from a piece of paper folded in half. Another page shows a

geometric design cut from a piece of paper folded in fourths, to illustrate symmetry. The attractive layout features full-color photographs depicting each activity. Children are shown in some but not all of the pictures. Recommended for school libraries. MOB Copyright 2001 Reed Business Information, Inc.
