CharlieBOOKFAN Pretty decent book with an interesting fairly original count, I read this book a while back but never wrote a review on it but figured I should now and I don't remember everything now actually but his count is different, he calls it the Red Zen count but I'm not so sure how accurate or powerful it would be honestly basically counting +2 for every other 2 or 7 cause what if a bunch of Black 2's and 7's came out early in a shoe but all the Red ones were in the back behind the cut card or close to the cut card you wouldn't even know you had an advantage or that your count should maybe be going up or vice versa if a lot of Red 2's and 7's came out early I think you might be over estimating your advantage possibly?? I think this count is probably less accurate and powerful than other level 2 counts like the Revere Point Count or the Zen Count or even the Unbalanced Zen 2 Count possibly that's why a direct comparison done by computer analysis would have been really interesting like another reviewer has said but I appreciate the idea of creating this count and I do find unbalanced counts interesting cause I also don't really like to constantly figure out the true count cause it wears you out faster but I am still a little skeptical of the accuracy of unbalanced counts vs balanced counts but I think the author wanted to have something new to call his own and his own invention and idea writing this which I do totally understand and appreciate and you can tell this Author does know the game for sure and lot of Blackjack Authors try to do that creating new counts even though tag values have already been extensively researched but Cris Statz you have 1 typo in your chart just to let you know where you have -6 for 12 vs 2 on 6 decks where it should be +6 cause your gonna want to hit 12 vs 2 a little more more often, also on the right you have the (D) which means the number should be positive instead of negative for the specific number of decks you are playing with going by how your chart works anyway, if you had (-D) on the right then the matrix numbers would be negative however many decks you are using but you don't have that negative sign on the right, you should fix that -6 and just take out that - so it will be a positive number instead which it should be anyway and update it for everyone who bought your kindle version so we can all get that fixed right away and have your book as accurate as possible and also fix it in future paperback print versions as well for all your customers who buy that version also and if you did that I would probably raise my rating to 4 stars and this book is also pretty pricey so if it was a little cheaper I would probably give it 4 stars, I do also think you should have a dedicated chart by itself that lists your initial starting running counts for whatever number of decks people are playing with cause you don't have that, you just talk about it in the text then have it in your matrix chart on the right but it's important enough to have in a chart all by itself in the beginning of your chapter talking about your count to make it as easy as possible for your readers to understand and implement plus your recommended bet spread of 1-8 simply isn't enough for shoe games and I know it's much harder to get away with bigger spreads and you say that which is true but it's very important for shoe games if you sit there the whole time you really do need to spread more, just maybe leave the shoe after you place your largest bets on big spreads once it's shuffle time, go the bathroom or to another Casino or only back count with smaller spreads but you have to recommend bigger spreads than what you do for shoe games, Knockout Blackjack only recommends a 1-8 spread also and I believe you probably recommend the same thing as them cause you read that book and it's a great book overall but I honestly believe they are out dated saying that plus your book is much newer than that book and should be more intelligent and accurate when it comes to profitable bet spreads since a lot more research has been done regarding bet spreads for shoe games which are the most prevalent games out there now by far, Modern Blackjack does a much better job than your book when it comes to bet spreads and they are very well organized and laid out, take a look at that book and you will see, you should recommend and list a bigger spread for 6 decks which are everywhere and even more of a spread for 8 decks for anyone that plays those in maybe Atlantic City possibly, I do like your more detailed matrix charts for 2 deck games compared to more decks cause the matrix is more important with less decks and your risk of ruin charts are pretty good, those are great additions but decent book overall, I do have a question Cris do you actually use this count when you play Blackjack or did you just invent it and want to write a book about it cause it's new and fairly unique? just curious cause some authors invent counts but don't actually use them like Arnold Snyder invented the Zen count but he actually used Hi-Opt 2 and Ken Uston had his Uston SS made up but never really used it himself in Casino's I believe but wanted to create an unbalanced count so I'm just curious if you actually use this count yourself and how does it work for you compared to other counts that you have maybe used?? Also you don't include deviations for single deck is that because you don't recommend your count to be use for single deck or what? I know there are virtually no good playable single deck games out there anymore cause most are worthless 6/5 games but you should still list some matrix numbers for 3/2 single deck as well as recommended bet spreads, don't just not include it at all but overall your book is pretty good though but could be a little better for sure.0 of 2 people found the following review helpful. Any one please helpBy ThooYa it is a great book...however , I could not understand the table "20 most important variations by number of decks"? (lesson 6) what is the Quick Key(I) (-D) (D) actually stand for? What is the action should be taken on each variation? can any one helps to explain?? thanks...

"The house doesn't beat the player; it just gives him the opportunity to beat himself." Nick Dandalos - Professional Card Counter The Card Counting Book For Professionals The methods and strategies in this book will give you give you a permanent mathematical advantage playing casino blackjack. Blackjack card counting doesn't have to be hard. If you can count without the help of your fingers, you can make money with the correct blackjack strategy. I, Cris Statz,

have taught everyone from high-school dropouts to P.H.D's. What's more, I'm betting I can teach you too. If you are new to blackjack then look no further. Modern Card Counting explains absolutely everything a new counter needs to know in order to consistently win at blackjack, all in an easy step by step model. Blackjack Strategy to Maximize Your Wins Modern Card Counting contains a hybrid system I call "Red Zen". The beauty of this system lies in its ability to retain accuracy, while at the same time maximizing the number of hands whose values "cancel out". This makes counting easier and faster, which leads to less errors and better cover. Experienced counters should feel encouraged to email me with any technical questions at ModernCounting@gmail.com Topics covered include: Casino rules and their mathematical effects Complete Basic Strategy tables for any set of casino blackjack rules Basic Strategy e-flashcards for any set of casino blackjack rules Detailed examination of a the level one system "Hi-Low" The process of creating a modern level two system the "Red Zen" Full Basic Strategy Variations (Indexes) Discussions on advanced blackjack strategies and modern adaptations Step by step calculations to find your specific advantage, risk, RoR, and expected return A look into the role of Standard Deviation and how to derive it Modern Casino surveillance methods and how to beat them And more... One of the Best Blackjack Counting Guides... This book is not a purchase, it is an investment. Following the methods in Modern Card Counting will mathematically guarantee the committed and properly invested blackjack card counter hundreds of thousands of dollars. Even seven figures is guaranteed if enough time is applied. Learn how to count cards in blackjack and you will win. It's not gambling, it's math.

From the Author Card Counting. It's not going to get you sent to a back room, but it will give you a thrill not soon forgotten. Imagine yourself stalking through a casino, like a lone wolf, silently sniffing out the juiciest pray. But unlike a wolf, card counters drain their pray slowly. Drop by drop, chip by chip, the sanguine bond of life slips into your favor. There is \$400 in front of you, a pile that waxes and wanes, but in your pockets are stacks of \$100 and \$25 chips. The pit boss suspects nothing. The dealer is lost in their own world, waiting for the next big tip. You decide it is time and walk out into the sea of slot machines. Hands in your pockets you start counting. In 4 hours of enjoyable play, the profit comes out to \$2425. Bigger than usual, but not the biggest you've seen. Averaging \$606 an hour, for the day, you think this might just be the right career for you. This is the life blackjack card counting offers. All you have to do is take it. From the Inside Flap To add to the value of this book, I've also added a database of free e-flashcards and a entirely new count - The Red Zen System. A level two count designed to reduce errors by increasing the chances of any two cards canceling out or equaling zero. The accuracy of the Red Zen system is comparable to any level two card counting system, while it's simplicity is perfect for novice to advanced card counters. From the Back Cover "Refreshing... A book that explores both the profit and the risk. The solid foundation in mathematics makes MCC a must have for any serious counter." --- Reed Turner, Tournament Blackjack Contact Cris Statz at ModernCounting@gmail.com
