Ken Rexford : Modified Italian Canape System before purchasing it in order to gage whether or not it would be worth my time, and all praised Modified Italian Canape System:

1 of 1 people found the following review helpful. Disappointing Bidding System BookBy R. LeedsI expected to be able to get an overview of all aspects of the Italian canape system, but the format of the book made it very difficult to use as a means of implementing a partnership system. I would have liked a clear depiction of possible sequences with

a description of the meaning of bids, theory of bid options and system responses. Instead, this is a very text heavy, although slender book, that I found less instructional than Bob Gish's book, which could also use a better explanation of various responses beyond the initial ones. 1 of 2 people found the following review helpful. challenging and rewarding
By Nancy L. Chorpita
Rexford has extracted the best of the Roman and Blue Club Systems and added lots of tweaks of his own to make a complete, integrated system that fits with General Convention Chart Rules. He is a theorist first, therefore this is not an easy read.. but who says bridge is an easy game? This book makes you think. Have been having great results playing MICS and still have lots to learn. 0 of 0 people found the following review helpful. Not well presented
By B. Einhorn
The author presents a home grown version of the Roman and Blue Club Systems and added some tweaks of his own that may or may not be sound, and certainly add to memory overload. I suggest you read the Gish book instead of this. (The New Awakening: an improved bidding system in bridge). I'm not necessarily endorsing that system, I just think that book is better presented.

In this book, Ken Rexford introduces the strong club relay system with canap bidding that he played successfully for years. His approach is novel, but it is also one that is easy to learn and play. Most importantly, the entire system fits within the ACBL General Convention Chart. As with his first book, Cuebidding At Bridge, Ken Rexford spends much time explaining the theory and thinking behind canap sequences, so that the reader will understand the approach rather than simply memorizing a list of conventions. The author also includes a basic scheme for converting your system from Precision to Canap, or even from Standard all the way to Canap, all in easy steps. For those who are intrigued but intimidated by Canap, this extra material should help to ease the transition.

"This simplified strong-club, canap system makes good reading for any system freak." --Anders Wirgren, Svensk Bridge
